

JGI Data Policy

Data produced and released by the US Department of Energy (DOE) Joint Genome Institute (JGI) are subject to the following Data Policy. It is our mission to support open data and information sharing. We also recognize the need to have a limited and time-sensitive protection of certain types of data to support their use by those generating data.

The JGI Data Policy applies to research data and analysis products (referred to as “data” for the remainder of this policy) produced through all user projects accepted FY22 and later through the Community Science Program (CSP), Facilities Integrating Collaborations for User Science (FICUS) initiative, Director’s Science (DS), Biological and Environmental Research Support Science (BERSS), or Bioenergy Research Centers (BRCs).

For sequencing or metabolomics projects: data are subject to a **one-year embargo**. For each data or analysis product (raw or processed), the embargo starts at completion of standard deliverables as described in the [product offerings](#). At the end of the embargo period data will be made publicly available on relevant JGI portals (i.e. JGI Genome/Data Portal, MycoCosm, PhycoCosom, Phytozome, or IMG) and outside repositories (e.g. NCBI SRA or GenBank) as described in the [product offerings](#) and are unrestricted for use.

For DNA synthesis projects: data are subject to a **two-year embargo** starting at construct or strain delivery. Detailed sequence information for constructs are made publicly available through outside repositories (e.g. the Inventory of Composable Elements (ICE) repository and/or DNASU Plasmid Repository) at the end of the embargo period.

During the embargo, proposal PIs, Co-PIs, and collaborators of any given proposal have full access to their data and may request full release to the public, ending the embargo at any point after data generation. The data will not be publicly available in JGI portals or outside repositories until the earliest of three points: (1) publication of the data (including, but not limited to, publication or citation of accession numbers in a peer-reviewed journal, or any public deposition of the data at outside repositories), (2) PI request to list data publicly, or (3) at the end of the embargo period. If data or analyses of the data are made publicly available in any format by the PI or collaborator during the embargo period, JGI will consider the embargo nullified. After the embargo period, JGI places no further restrictions on data availability or utilization except as outlined in the [Publication Policy](#).

For questions about JGI policies, please contact jgi-data-policy@lbl.gov.

For a complete list of standard deliverables see the [product offerings](#). All data are also subject to the Publication Policy.
