

Genome Sequencing Collaboration Opportunities

Do you have a scientific question requiring genomic data of microbial samples?

➔ **Locate your strains of interest with the USCCN registry and sequence them at the JGI**

Search the USCCN registry for a collection containing your specimen of interest

The USCCN **searchable registry** of microbial culture collections includes all types of collections, from university small research collections to large federally funded collections.

Anyone is welcome to **add their collections** to then registry.

Get in touch with the collection's owner to source the best strains to sequence

Send it to the JGI for sequencing, at no cost to you!

JGI delivers **high-quality genome data** along with resources for comparative genomics, and collaboration opportunities.

Nominate your strains for sequencing at the JGI.

Once approved, **prep** your DNA.

Got 100s, 1000s, 10,000s isolates to sequence?

Explore JGI Calls for User Proposals and contact us if you have questions.
